PROFESSIONAL SUMMARY

Senior Frontend Engineer with 7+ years building and scaling web applications in React and Vue, and comfortable working down the stack in Elixir/Phoenix and Node.js. Owns frontend architecture end-to-end, from design systems and monorepo strategy to shipped product features, sets technical direction, mentors engineers, and uses AI-assisted tooling to move faster, shipping products that drive business outcomes. Shares technical notes on a [personal blog](#).

TECHNICAL SKILLS

Languages:	JavaScript/TypeScript, Elixir
Frontend & Testing:	React.js, Vue.js, Next.js, LiveView (Elixir/Phoenix), React Hook Form, Zod, RxJS, Jest, Cypress
Styling/UI:	HTML/CSS, SCSS/Sass, Tailwind CSS, CSS-in-JS, styled-components, Ant Design, Headless UI, shadcn/ui, Responsive Design, Accessibility (a11y)
State Management:	Redux, Redux Toolkit, Zustand, Jotai, Vuex, Context API
API Integration:	GraphQL, REST APIs, Google Maps API
Backend:	Elixir/Phoenix, Node.js, PostgreSQL
Tooling & DevOps:	Git, CI/CD, Monorepo, Micro Frontends, Webpack, Turbopack, Puppeteer, Docker, Vercel, Netlify

PROFESSIONAL EXPERIENCE

Senior Frontend Engineer @ Trucker Path

10/2025 - Present

North America's #1 truck navigation (Truck GPS) · Moatable Inc. · Employer of Record: PERSOL Vietnam

NavPro v2: Fleet TMS & Navigation Platform

Team of 12

Shaped early technical direction for NavPro v2, a cloud-based TMS and navigation tool for commercial truck fleets, within a distributed international team.

- Helped define coding conventions, project structure, and shared patterns for the v2 codebase so a distributed team could contribute consistently.
- Ported v1 modules to v2 with AI-assisted tooling (Cursor, Claude Code), preserving core logic while enhancing UX and aligning with the new design system.
- Rebuilt the interactive map layer from scratch on Google Maps API (replacing HERE Maps), enabling complex multi-stop fleet routing.
- Established a review workflow across PRDs, Figma specs, and frontend PRs, improving code quality and delivery speed.

React, TypeScript, Redux Toolkit, Tailwind CSS, shadcn/ui, React Hook Form, Zod, Google Maps API

Truckloads: Carrier-Facing Features

Team of 5

Shipped features for Truckloads, a free load board connecting owner-operators with 150,000+ daily freight listings.

- Built the frontend for the Docs Pro subscription and its upgrade flow, opening a new recurring revenue stream around document scanning, signing, and management.
- Created a WEX factoring signup form that achieved a 20% conversion rate, driving freight invoice financing enrollment.
- Expanded Mixpanel instrumentation across load search and carrier flows, giving the product team data that shaped iteration priorities.

React, SCSS, RxJS, Ant Design, Mixpanel

Back Office: POI Data Management

Team of 6

Extended the back office managing the 50K+ POI database behind truck navigation.

- Implemented POI management features for truck stops, weigh stations, and fuel stations, covering requirements through QA sign-off.
- Unified Mixpanel tracking across modules and stripped PII from events to meet compliance requirements.

Vue.js, SCSS, single-spa (micro frontends)

Senior Frontend Engineer @ Care

08/2023 – 06/2025 (1 year 9 months)

Singapore digital health and employee wellness platform · Employer of Record: Talent Matrix VN → Remote.com

Health Screening Report Generation System

Team of 4

Architected a service that cut PDF health report generation from 1-2 hours (manual) to under 60 seconds, leading a 4-person frontend team. The system streamlined clinical workflows and laid a foundation for future data products.

- Designed the system architecture from scratch and set up coding standards and CI/CD pipelines.
- Developed server-side PDF rendering on Next.js API routes (serverless functions) with Puppeteer, turning complex lab data into clinician-ready reports with Recharts visualizations.
- Aligned frontend, backend, and data teams on integration contracts, unblocking downstream feature work and launching health reports as a new platform capability.

Next.js, Turbopack, Puppeteer, Recharts, TypeScript, Tailwind CSS, Docker

Enterprise Wellness Platform

Team of 10

Led frontend development for a partner-facing wellness platform with advanced customization and mobile-integrated features.

- Shipped responsive, accessible UIs in React and TypeScript across multiple product modules, coordinating with backend and mobile teams.
- Engineered webview integration for the Flutter app, resolving cross-platform edge cases on Android and iOS.
- Consolidated four frontend repositories into a monorepo, eliminating duplicated components and cutting onboarding time.
- Added event tracking across key user flows, surfacing usage patterns that informed UX redesigns.

React, TypeScript, Zustand, Next.js, SCSS, Tailwind CSS, Ant Design

Membership Management Module

Team of 12

Enhanced the core membership system and partner back-office with UX improvements and third-party integrations that boosted user satisfaction and streamlined data collection.

- Collaborated with product, design, and backend on user-facing interfaces, keeping them aligned with the design system and passing accessibility reviews.
- Evaluated form-builder frameworks (form.io, BEEKAI) and built a POC showing a path to cutting form-related code duplication by 70% and speeding up client onboarding.

React, TypeScript, Zustand, Next.js, Tailwind CSS, Ant Design

Full-Stack Engineer @ Deliany

10/2020 – 07/2023 (2 years 9 months)

Restaurant POS and management SaaS · Rebranded: Deliany → Cloud Food System → Norra (norra.ai)

Multi-tenant Restaurant Cloud Platform

Team of 8

Transitioned from frontend to full-stack engineer, leading the architecture of a new POS system and a company-wide UI library.

- Architected and delivered a real-time POS system (Elixir/Phoenix + React) for complex order management, owning decisions from data modeling to frontend state management.
- Created the React component library on Headless UI, adopted as the company-wide design standard.
- Drove a 20% increase in checkout and signup conversion rates by optimizing UI flows based on user behavior data.

- Ran targeted refactors across multiple codebases, cutting build times and technical debt.
 - Mentored two junior developers through code reviews and pair programming.
- Elixir/Phoenix, React, TypeScript, Recoil, Next.js, GraphQL, PostgreSQL, styled-components*

Frontend Engineer (Freelance) @ Multiple Clients

09/2019 - 10/2020 (1 year 1 month)

Logistics & Package Tracking Platform

Team of 3

Rebuilt the frontend of a shipping platform with real-time package tracking, focusing on performance and component reusability.

- Restructured the Vue.js frontend into a modular component library, cutting feature implementation time by 40%.
- Improved page load times by 200% through code-splitting, lazy loading, and dependency optimization.

Vue.js, Vuex, SCSS, Bootstrap

Real-Time Video Communication App

Team of 5

Owned the architectural migration and feature work for a browser-based video chat product.

- Single-handedly migrated the app from Vue/Parcel to React/Webpack, delivering a 30% performance boost and a maintainable module structure.
- Integrated WebRTC for reliable, low-latency peer-to-peer video across browsers.

React, Redux, WebRTC, Webpack

Software Engineer @ Dwarves Foundation

04/2019 - 09/2019 (5 months)

Software consultancy building products for international clients

TelemetryTV: Digital Signage Platform

Team of 5

Contributed core features to [TelemetryTV](#), an enterprise digital signage platform, during a major architectural migration.

- Migrated dozens of legacy Vue components to a Gridsome-based architecture, improving build performance and developer experience.
- Translated Figma designs into pixel-accurate, interactive application UIs.

Vue.js, Vuex, Gridsome, GraphQL, Tailwind CSS

DATCOM Internal Ordering System

Team of 5

Built an internal lunch-ordering system end-to-end in an Agile team, gaining full-stack experience during the DATCOM internship program.

- Designed the PostgreSQL schema and built and tested REST API endpoints in Golang (Gin/GORM).
- Built the React and Tailwind CSS admin frontend covering the full ordering and reporting flow.

Golang, PostgreSQL, GORM, React, Tailwind CSS
